

Cockatiel

Lifespan: 15-17 years

Feed: Cockatiel seed

Description: Cockatiels have grey feathers on much of their body with yellow feathers on their face and crest and an orange spot on their cheeks.

Overview: Cockatiels are a great addition to any family. Cockatiels are smart & affectionate. They can learn to talk, but it is rare and they can only learn several words. Cockatiels are easy to train. They should have a large cage to allow movement. Their lifespan is directly related to the quality of its diet. With a good diet, a cockatiel will more likely lead a long and healthy life. Clipping your cockatiel's wings will ensure that it does not harm itself if it is startled.
