

Hamster

Lifespan: 1-3 years

Feed: Hamster Food

Description: Hamsters are small animals with round ears, soft fur and a short tail. They come in different varieties (i.e. golden, fancy, teddy bear, or dwarf)

Overview: Hamsters are good pets for children. They are aggressive against other hamsters, and should be housed individually. Hamsters are nocturnal and will sleep during the day, therefore they are not very fun for a child unless he/she is allowed to stay up late. At night, however, a hamster will treat you with an energetic display.
