

# Mice

**Lifespan: 2-3 years**

**Feed: Mouse Food**

**Description: Mice are small animals with loopy ears and long tails. They come in a variety of colors.**

**Overview: Mice have good personalities and get along quite well with children. They are fairly easy to tame, and can be picked up by the tail if they see that it is you doing it. They do not like to be held too snugly. Mice should not be kept alone as pets, because a sole mouse becomes nervous and hard to handle. Two females are fine together, but two males may fight and injure each other.**
